EXAMINER

DHARIA, PRABODH M

ART UNIT PAPER NUMBER

2629

DATE MAILED: 09/20/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/892,997

Applicant(s)

KANG ET AL.

Examiner

Prabodh M. Dharia

Art Unit

2629

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 10 August 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-8, 13-17, 21, 25-27, 29, 30 and 32-39 is/are pending in the application.
- 4a) Of the above claim(s) 9-12, 18-20, 22-24, 28 and 31 is/are withdrawn from consideration.
- 5) ☒ Claim(s) 36-39 is/are allowed.
- 6) ☒ Claim(s) 1-8, 13-17, 21, 25-27, 29, 30 and 32-35 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 28 June 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

Art Unit: 2629

1. **Status:** Please all the replies and correspondence should be addressed to Examiner's new art unit 2629. Receipt is acknowledged of papers submitted on 07-10-2006 under RCE and amendments, which have been placed of record in the file. Claims 1-8, 13-17, 21, 25-27, 29, 30 and 32-39 are pending in this action. Claims 9-12, 18-20, 22-24, 28 and 31 are cancelled.

***Response to Amendment***

The amendments to claims **1, 13, 21, 29, and 34** filed on 07-10-2006 do not introduce any new matter. The amendments to claims **1, 13, 21, 29, and 34** are supported by the original disclosure.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims **1, 4-6, 13-17, 21,25-27,29,30,32-35** are rejected under 35 U.S.C. 103(a) as being unpatentable over Tone (U.S. Patent 6,046,712) in view of Margulis et al. (6,157,396) and Tu et al. (5,877,717).

Regarding **independent claims 1, 13, 21, 29, and 34** Tone teaches an apparatus for providing a gamma voltage correcting apparatus for a liquid crystal display (column 17, lines 60-62; column 59-67,

Art Unit: 2629

figure 17 at 615a) wherein video data is corrected by a preset gamma voltage to display an image entering desired values for the x- and y-coordinate data  $X_n$  and  $Y_n$  to facilitate the operation of gamma correction (column 14, lines 1-15, figure 16-19 at 615).

Furthermore, Tone teaches how the apparatus comprises a memory means by external data RAM 403 for storing gamma correction for controlling the gamma voltage for each of at least two modes by teaching how the data entry unit 615 enters data to the external data RAM 403 via the external CPU, which activates the mode change signal and the grayscale level such that users can use the data entry unit 615 to write gamma correction data in the external RAM 403 (column 13, lines 28-44, figure 15 at 403, 615).

Also, Tone teaches a control means by teaching CPU 513 which activates the mode change signal and the grayscale level such that users can use the data entry unit 615 to write gamma correction data in the external RAM 403 (column 13, lines 28-44, figure 15 at 403, 615).

Furthermore, Tone teaches a multi-channel gamma voltage generator for responding to the gamma data for a mode selected by the control means to generate  $n$  gamma voltages (wherein  $n$  is an integer) having a different voltage level indicated by the gamma data for the selected mode by teaching a gamma correction device 400 with external RAM 403 that includes a plurality of grayscale level correction groups wherein each of the grayscale level data sets has a different number  $n$  which is the number for dividing the grayscale level range (column 12, lines 10-36, figure 13 at 300, 400).

However, Tone fails to recite or disclose video data modulated by a gamma voltage correction apparatus are applied to the data lines of a display device, via a column driver; on the other hand Margulis et al. discloses video data modulated by a gamma voltage correction apparatus are applied to the data lines of a display device, via a column driver (Col. 13, Lines 35-47, Line 62 to Col. 14, Line 5, Col. 16, Line 33 to Col. 17, Line 65, Col. 18, Lines 8-26, Col. 19, Line 36 to Col. 20 Line 23, Col. 24, lines 17-23) and Margulis et al. teaches receiving video data (Col. 6, Lines 53-61 receiving

Art Unit: 2629

industry standard (NTSC, PAL, S-Video) video data) and vertical and horizontal synchronizing signals and outputting the video data and a clock (Col. 7, Lines 4-12, Lines 26-38, Col.9, Lines 1-5 receives composite data has horizontal and vertical timing component and sampling of video data (clocking) occurs at 100 MHZ). It is well known to a person of ordinary skill in the art, the composite video data such as NTSC, PAL or S-video carries not only video data but also Horizontal, vertical, and clocking information (see Taubman et al. (6,297,851 B1) Col. 1, Lines 11-32, Col. 7, line 53 to Col. 8, Line 13).

Thus, it would have been obvious to a person of ordinary skill in the art to combine Tone and Margulis et al. because while Tone teaches how a CPU 513 activates a mode change signal and the grayscale level such that users can use the data entry unit 615 to write gamma correction data in the external RAM 403 (column 13, lines 28-44, figure 15 at 403, 615), Margulis et al. teaches how the LCD (Col. 6, Line 37) comprises a column driver for correcting the video data by performing gamma correction and supplying the corrected video data to the data lines (Col. 13, Lines 35-47, Line 62 to Col. 14, Line 5, Col. 16, Line 33 to Col. 17, Line 65, Col. 18, Lines 8-26Col. 19, Line 36 to Col. 20 Line 23, Col. 24, lines 17-23). The motivation for combining these inventions would have been to provide optimized a high quality display device (Col. 1, Lines 8-11).

Tone fails to recite or disclose a multi-channel gamma voltage generator having a plurality of digital to analog converters (DACs), the digital to analog converters generating n gamma voltages (wherein n is an integer) having a different voltage level in response to the digital gamma data respectively. However, Tu et al. discloses a multi-channel gamma voltage generator having a plurality of digital to analog converters (DACs) (Col. 1, Lines 20-24, Col. 3, Lines 20-31), the digital to analog converters generating n gamma voltages (wherein n is an integer) having a different voltage level in response to the digital gamma data respectively (Col. 1, Lines 20-24, Col. 3, Lines 20-31, Col. 6, lines 36-67, Col. 7, Line 1-52, Col. 8, Lines 1-4).

Art Unit: 2629

Thus, it would have been obvious to a person of ordinary skill in the art to combine Tone and Tu et al. because while Tone teaches how a CPU 513 activates a mode change signal and the grayscale level such that users can use the data entry unit 615 to write gamma correction data in the external RAM 403 (column 13, lines 28-44, figure 15 at 403, 615), Tu et al. teaches the LCD (Col. 1, Lines 29,30) comprises a multi-channel gamma voltage generator having a plurality of digital to analog converters (DACs) (Col. 1, Lines 20-24, Col. 3, Lines 20-31), the digital to analog converters generating n gamma voltages (wherein n is an integer) having a different voltage level in response to the digital gamma data respectively (Col. 1, Lines 20-24, Col. 3, Lines 20-31, Col. 6, lines 36-67, Col. 7, Line 1-52, Col. 8, Lines 1-4). The motivation for combining these inventions would have been to provide optimized a high quality display device with optimizing space required by a multi channel DAC with gamma correction circuitry (Col. 1, Lines 19-44).

Regarding **claims 4 and 5**, in further discussion of claim 1, Tone teaches how gamma data for the selected mode by teaching a gamma correction device 400 with external RAM 403 that includes a plurality of grayscale level correction groups wherein each of the grayscale level data sets has a different number n which is the number for dividing the grayscale level range (column 12, lines 10-36, figure 13 at 300, 400).

Regarding **claim 6**, in further discussion of claim 1, Tone teaches how the memory means and the control means are integrated into a single integrated circuit (figure 13 at 400, 312, 403).

Regarding **claims 2, 14-17, 25-27, 30, 32, 33 and 35** in further discussion of claims 13, 21, 29, and 34 Tone teaches a gamma correction device 400 with external RAM 403 that includes a plurality of grayscale level correction groups wherein each of the grayscale level data sets has a different number n

Art Unit: 2629

which is the number for dividing the grayscale level range (column 12, lines 10-36, figure 13 at 300, 400).

Margulis et al. discloses video data modulated by a gamma voltage correction apparatus are applied to the data lines of a display device, via a column driver and user controlled (Col. 13, Lines 35-47, Line 62 to Col. 14, Line 5, Col. 16, Line 33 to Col. 17, Line 65, Col. 18, Lines 8-26 Col. 19, Line 36 to Col. 20 Line 23, Col. 24, lines 17-23, Col. 24, lines 31-39, Col. 5, Lines 54-58).

4. **Claims 3, 7 and 8** are rejected under 35 U.S.C. 103(a) as being unpatentable over *Tone* (U.S. Patent 6,404,512) in view of Margulis et al. (6,157,396) as applied to claims 1, 4-6, 13-17, 21, 25-27, 29, 30, 32-35 above and further in view of *Hiroki* (U.S. 6,771,238).

Regarding **claims 3**, in further discussion of claim 1, *Tone* modified by Margulis et al. teaches a gamma correcting apparatus for a liquid crystal display (column 14, lines 1-15, figure 16-19 at 615).

However, *Tone* modified by Margulis et al. does not teach how the LCD comprises a column driver for correcting the video data using the gamma voltage from the multi-channel gamma voltage generator and supplying the corrected video data to the data lines. On the other hand, *Hiroki* discloses an active matrix display device, comprising a plurality of pixels arranged in a matrix form a first driver circuit connected to scanning lines and a second driver circuit connected to signal lines (column 4, lines 29-35) wherein the video signal processing circuit 20 mainly performs gamma correction such that the processed video signal is inputted from the source driver circuit 13 through the signal line 18 to the pixel matrix area 11, thus applied to the pixel electrode of the liquid crystal cell 15 (see column 1, lines 66 through column 2, lines 1-15).

Thus, it would have been obvious to a person of ordinary skill in the art to combine *Tone* modified by Margulis et al. and *Hiroki* because while *Tone* teaches how a CPU 513 activates a mode

Art Unit: 2629

change signal and the grayscale level such that users can use the data entry unit 615 to write gamma correction data in the external RAM 403 (column 13, lines 28-44, figure 15 at 403, 615) and Margulis et al. discloses video data modulated by a gamma voltage correction apparatus are applied to the data lines of a display device, via a column driver (Col. 13, Lines 35-47, Line 62 to Col. 14, Line 5, Col. 16, Line 33 to Col. 17, Line 65, Col. 18, Lines 8-26 Col. 19, Line 36 to Col. 20 Line 23, Col. 24, lines 17-23), Hiroki teaches how the LCD comprises a column driver for correcting the video data by performing gamma correction and supplying the corrected video data to the data lines (see column 1, lines 66 through column 2, lines 1-15). The motivation for combining these inventions would have been to provide a high quality display device (column 3, lines 15-21).

Regarding **claims 7 and 8**, in further discussion of claim 3, Hiroki discloses an active matrix display device, comprising a plurality of pixels arranged in a matrix form a first driver circuit connected to scanning lines (column 4, lines 29-35) wherein a timing controller via the video processing circuit 110 facilitates the supply of red, green and blue digital video data to the column driver and for applying a desired timing control signal to the row driver (see column 5, lines 32-62).

#### ***Allowable Subject Matter***

5. Claims 36-39 are allowed.

6. The following is an examiner's statement of reasons for allowance: The claim 36 was allowed in non-final office action mailed on 11-29-2005, the newly added claims 37-39 depend from independent claim 36, therefore after further search and consideration claims 37-39 are also allowable.

Art Unit: 2629

A display device having a gamma voltage correcting part, wherein the display device has a display panel that includes a plurality of pixels defined by gate lines and data lines, the display device comprising: a display controller for receiving a first video data and vertical and horizontal synchronizing signals and outputting a second video data and a clock; **a lookup table driver connected to the display controller for adjusting color temperature of the second video data and outputting a third video data; the gamma voltage correction part including', a memory for storing at least two sets of gamma data for at least two input modes, a gamma controller for accessing one set of the gamma data in response to a selection signal, a multi-channel gamma voltage generator for responding to the one set of the gamma data to generate n gamma voltages (wherein n is an integer) having different voltage levels, and a column driver connected to the display panel, wherein the column driver receives the third video data and the n gamma voltages, and then corrects the third video data using the n gamma voltages and applies the corrected video data to the data lines.**

The cited references fails to disclose above underlined bold claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Response to Arguments***

7. Applicant's arguments, see remark, filed 07-10-2006, with respect to the rejection(s) of claim(s) 1, 13, 21, 29, and 34 under traversing and request for reconsideration have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Tu et al. (5,877,717).

***Conclusion***

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Rao et al. (6,225,931 B1) D/A converter with gamma correction circuitry.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Prabodh M. Dharia whose telephone number is 571-272-7668.

The examiner can normally be reached on M-F 8AM to 5PM.

10. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

11. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR

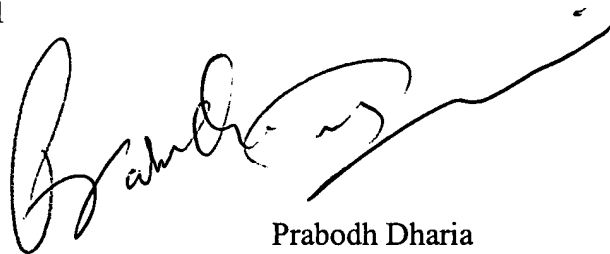

Art Unit: 2629

system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks
